**DETAILED ACTION**

1. Last OA is hereby incorporated by reference.

***Response to Arguments***

2. Applicant's arguments filed 4/18/08 have been fully considered but they are not persuasive.
3. Re Claims 1, 2, 5-28, Applicant argues Hamiti does not disclose that the SIP is general or a header of the SIP in particular is used for monitoring of quality of service. However, this limitation is not claimed. Further argues that Hamiti fails to teach, "transmitting information representative of said QoS during said using said signaling plane, wherein the QoS information is transmitted within the header of the SIP message...".

Hamiti teaches the session is established in accordance to the SIP protocol whereby the signaling procedure employs a signaling plane to establish and terminate sessions over the network. Although, Hamiti teaches that "monitoring the QoS to the ...session", Hamiti fails to teach the "QoS information is transmitted within the header of the SIP message". However, this teaching is found in Honeisen. Furthermore, since the SIP header in Hamiti is modified to carry QoS information, as suggested by Honeisen, it is apparent to skilled that the SIP signaling to employ the signaling plane to be consistent with the protocol.
